**FRENCH, ITALIAN DISTRIBUTORS APPOINTED
FOR TRAC ECOLOGICAL PRODUCTS
Biodegradable Products Keep Onboard Water Systems Clear & Clean**

AMSTERDAM, NETHERLANDS, NOVEMBER 13, 2007 - TRAC Ecological Products of Ft. Lauderdale, Florida, manufacturer of environment-friendly products to clean marine water systems, announced at METS (Marine Equipment Trade Show – Stand 7.574) in Amsterdam today that Proyacht and Mansueto Marine now distribute its product line in France and Italy, respectively.

Marine growth & scale build-up are major causes of water-cooled equipment failure. Traditional methods of cleaning (such as mechanical brushing or harsh acids) can damage equipment and are potentially harmful to the user and the environment. TRAC Ecological™ has developed a unique line of safe, biodegradable chemicals that efficiently & economically dissolve scale, barnacles, zebra mussels, calcium, rust, lime and other mineral deposits that can reduce water flow.

Marine dealers in France interested in carrying TRAC Ecological products should call (0) 493 229 865. In Italy, dealers should call +39 0184 573 346. For more information about TRAC products, log on to www.trac-online.com.
