**TRINITY YACHTS FIRST BOAT BUILDER TO INSTALL
TRAC ECOLOGICAL FLUSHING POINTS SYSTEM
Biodegradable Products Keep Onboard Water Systems
Clear & Clean**

FORT LAUDERDALE, FL (USA) - TRAC Ecological Marine Products of Ft. Lauderdale, Trinity Yachts of New Orleans, Louisiana, is the first boat builder to install the TRAC Ecological Flushing Points System - isolating valves that allow internal cleaning of sea water cooled systems - without disassembly.

"Now with a simple turn of a valve, all sea water cooled systems and piping, such as main engines, generators, A/C and refrigeration can be cleaned quickly and efficiently, without having to disassemble anything," said Kevin Greene, CEO of Ft. Lauderdale, Florida-based TRAC Ecological. "Our unique Flushing Points System cuts labor costs in half," he added.

Mike Wood, Trinity Yachts Project Manager, said "The addition of TRAC Flushing Points to our boats has taken us to a new level of system serviceability. Installation and use is quick, easy and very cost effective."

The TRAC Ecological Flushing Points System is designed to be used with TRAC's line of safe, biodegradable chemicals that quickly dissolve scale, barnacles, zebra mussels, calcium, rust, lime and other mineral deposits that can reduce water flow.
