**TRAC ECOLOGICAL CHOOSES OCEAN MARKETING
FOR US EAST COAST SALES
Biodegradable Products Keep Onboard Water Systems
Clear & Clean**

FORT LAUDERDALE, FL (USA) - TRAC Ecological Marine Products of Ft. Lauderdale, Florida, manufacturer of environment-friendly products to clean marine water systems, has chosen Ocean Marketing to represent its product line on the US east coast.

Marine growth & scale build-up are two major causes of water-cooled equipment failure. Traditional methods of cleaning (such as mechanical brushing or harsh acids) can damage equipment and are potentially harmful to the user and the environment. TRAC Ecological™ has developed a line of safe, biodegradable chemicals that efficiently & economically dissolve scale, barnacles, zebra mussels, calcium, rust, lime and other mineral deposits that can reduce water flow.

Headquartered in Guilford, Connecticut, Ocean Marketing has been representing leading marine products manufacturers since 1968. Dealers and boat builders along the US east coast interested in TRAC Ecological products should call 1+800.343.8294.

For more information about TRAC Ecological, visit www.trac-online.com or call 1+954.987.2722.
